

Grain weevil

Saw-toothed grain beetle

ALWAYS READ THE LABEL AND USE PESTICIDES SAFELY

K-Obiol® EC25

THE NEW GRAIN STORE INSECTICIDE ~ ASSURED PROTECTION

Assured protection with K-Obiol® EC25

MODERN PYRETHROID FORMULATION

K-Obiol® EC25 is a modern pyrethroid formulation containing Deltamethrin, synergised with piperonyl butoxide for the control of all stored product insects known to infest grain and pulses. This pyrethroid formulation is an ideal alternative to organo-phosphorus formulations. The Maximum Residue Limit (MRL) nominated for deltamethrin is 2mg/kg in grain. When **K-Obiol® EC25** is applied at recommended rate, the residue level (0.25mg/kg) will be 8 times lower than the MRL.

NO WITHHOLDING PERIOD

On finished, manufactured product, flour and bread: no residues over the MRL are found as deltamethrin does not significantly penetrate the grain but remains on the bran.

Within hard wheat manufactured products, semolina and pasta: no residues over the MRL of deltamethrin were detected.

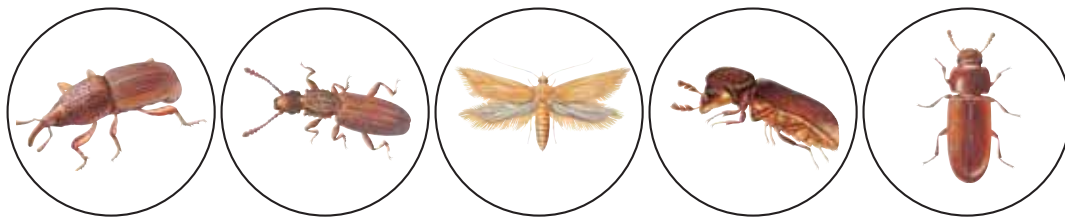

In malting: no residues over the MRL of deltamethrin is found in wort or beer, and it therefore has no effect on beer.

K-Obiol® EC25 is a liquid grain protectant for the control of stored product pests including crawling insects such as grain weevils, flour beetles, grain borers, saw-toothed grain beetles, bean weevils and flying insects such as warehouse moths, rice moths, Indian meal moths and grain moths.

UP TO 12 MONTHS CONTROL

Add 1 litre of **K-Obiol® EC25** to 99 litres of water and apply this to 100 tonnes of grain for protection up to 12 months.

K-Obiol® EC25 can be applied to the fabric of the building - Add up to 60ml of **K-Obiol® EC25** to 5 litres of water. Refer to the label for different porous and non-porous application rates. This fabric treatment provides 2 months protection.

K-Obiol® EC25

THE NEW GRAIN STORE INSECTICIDE

What is it?

- A modern pyrethroid grain protectant
- Synergised for effective control of all major grain and pulse insects
- Provides up to 12 months protection against re-infestation with a single treatment
- Can be used for pre-harvest building fabric treatment
- Acts rapidly and no withholding period
- Extremely low terminal residues
- Accepted by all major millers and maltsters
- Ideal alternative to organo-phosphorous formulations

What does it do?

- Gives excellent long term control of UK injurious grain store pests
- Fast acting – kills pests within hours
- Allows flexible movement of grain out of store

What other benefits does it have?

- Accepted by NABIM & BRI
- Low terminal residues
