

LG Motown

Very high yielding soft feed variety, with very good disease resistance

Nabim Group: Group 4

Market Options: UK Distilling & Feed

OWBM Resistance: Yes

Sowing Date: Normal & Late

Rotational Position: First Cereal

Soil Type: Light Soils

LG Motown is a very high yielding soft feed wheat, offering growers a variety with a very good disease resistance profile and quality specifications for the distilling and feed markets.

LG Motown has shown very good yield potential in both fungicide treated and untreated trials and shows very good consistency of yield over both regional and seasonal databases.

LG Motown is similar in height to KWS Santiago and, although the new Recommended List states it is similar ripening to JB Diego, previous data and Limagrain experience would suggest the variety is earlier ripening, seen especially in the north. The variety has very good disease resistance to both yellow and brown rust, and *Septoria tritici*. The variety also carries resistance for OWBM.

Quality Seed – direct from breeder to farmer

Strengths

- A very good disease resistance profile
- Early maturity
- Very good yield potential
- Good resistance to yellow and brown rust, and Septoria tritici
- Resistance to OWBM
- Market opportunities for distilling and feed

Technical Information

Technical information for LG Motown is below.
